

Introduction to Programming II

Project Log

Project title:	Music Visualization App
Topic:	Project log number 1 (Week 10)
What progress have you made in this topic?	
Getting my Midterm project ready for submission. Spent the week finding all the tools, resources, inspiration along with making UI designs	
What problems have you faced and were you able to solve them?	
Hard to know where to start. Picking a final direction given the limited time we have for this project.	
What are you planning to do over the next few weeks?	
Recover from the midterm submission rush and get back on track with planning the entire project.	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
I don't know. I think I am.	

Project title:	Music Visualization App
Topic:	Project log number 2 (Week 11)
What progress have you made in this topic?	
Continuation of for researching all the tools, resources, inspiration along with making UI designs	
What problems have you faced and were you able to solve them?	

Picking a final direction given the limited time we I have less than 9 weeks to get this going.

What are you planning to do over the next few weeks?

Have my designs ready to start coding.

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?

I don't know, I think yes.

Project title:	Music Visualization App
Topic:	Project log number 3 (Week 13) Ext 1. Build the base UI
What progress have you made in this topic?	
I built the entire Playbar UI, nothing functional but it's displaying like in my designs. I got the play button to work, I got the track time to display and the elapsed time to count down too. Built the mute button, but these will be refactored to consider all the playlist functionality.	
What problems have you faced and were you able to solve them?	
I wasted a lot of time researching how to build this UI. Should I build it with P5JS graphics library or should it be done with HTML. I spent a lot of time researching the pros and cons. In the end i decided to build the base UI with HTML and not P5JS library.	
What are you planning to do over the next few weeks?	
Start building all the UI interactive features like pop ups.	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
I think so.	

Project title:	Music Visualization App
-----------------------	-------------------------

Topic:	Project log number 4 (Week 14) Cont. Ext 2. Build the base UI
What progress have you made in this topic?	
Working on the popup constructor.	
What problems have you faced and were you able to solve them?	
This was a challenge. I built them with HTML and had to research how to build them with Vanilla JS since the tool bar was going to be built with HTML. Getting all the click event to work nicely and to also build them in an object-oriented manner so that I can reuse them for all my popup needs.	
What are you planning to do over the next few weeks?	
Pop ups are still buggy, I will need to continue working on these next week.	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
I am positive, but i am annoyed by the popup being buggy.	

Project title:	Music Visualization App
Topic:	Project log number 5 (Week 15) Cont. PopUps and Playlist feature
What progress have you made in this topic?	
Fixing the popup constructor as implementing the Playlist feature is opening the door for more complexities. Got the first default clips to load into the play list and built the logic to have the use play the tracks from the playlist. Started looking into the uploading functionality.	
What problems have you faced and were you able to solve them?	
Getting the array of music to be able to pause and play the proper playing track. Setting up a logic that will communicate via the array of tracks and the current track.	
What are you planning to do over the next few weeks?	
Getting the upload feature working and the ability to remove tracks.	

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?

This playlist functionality is a lot more challenging than i anticipated.

Project title:	Music Visualization App
Topic:	Project log number 6 (Week 16) Cont. Playlist feature & Uploads
What progress have you made in this topic?	
I created a HTML button that triggers an upload window. I had to learn about Blob URLs	
What problems have you faced and were you able to solve them?	
Getting the JS to trigger an upload modal and learning how to manage the Blob URLs. Then building an array with .push() to push the blob URLs and names into.	
What are you planning to do over the next few weeks?	
Need to start creating the delete track feature. And create the popup window for the visualizations	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
It's week 16 this playlist functionality is a lot more challenging than I anticipated. I hope in the next 4 weeks go smoothly.	

Project title:	Music Visualization App
Topic:	Project log number 7 (Week 17) Cont. Playlist feature + Popup for choosing and selecting visualisations.
What progress have you made in this topic?	

So I built the remove tracks logic on the playlist. Built the popup for the visualisations.

What problems have you faced and were you able to solve them?

I had to revisit the logic of the click events with popup as there were odd behaviors with conflicting click events with the deleting and clicking on track to make the track play.

What are you planning to do over the next few weeks?

Need to start building the track seek bar.

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?

It's week 17 the player can now choose tracks, skip and prev track. I can upload tracks, delete tracks pause and play the current track. Progress seems good. track seek bar, should be using preexisting logic and use P5JS techniques that we learnt last semester.

Project title:	Music Visualization App
Topic:	Project log number 8 (Week 18) Seek Bar
What progress have you made in this topic?	
So over the past weeks, I have implemented all the core audio player functionalities. A user can now choose tracks, skip to the next or previous track, upload and delete tracks, as well as play and pause the current track. I now have a solid foundation for integrating the seek bar, which will allow users to navigate within a track.	
What problems have you faced and were you able to solve them?	
We learned some good tools and skills from the previous course as well as learn about the map function in P5JS which all came in handy. Getting the seek bar to be clicked and dragged was definitely the more challenging part.	
What are you planning to do over the next few weeks?	
Start building my visualizations	

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?

I am happy i got this built in the week. I had to put in some over time, i think we are on track to get to the end. I realised that i never did the mobile responsive goal. I don't think it will be happening this project. I think i will have something presentable by the due date.

Project title:	Music Visualization App
Topic:	Project log number 9 (Week 19) Weather Visualization
What progress have you made in this topic?	
I have integrated weather data, geolocation, and time zones into the music visualization. The app now fetches real-time weather conditions and city names, displaying them alongside the circular wave visualization. The waveform reacts dynamically based on the temperature and is influenced by music frequencies.	
What problems have you faced and were you able to solve them?	
Mapping multiple APIs together efficiently. I had to ensure weather, time zone, and location data were retrieved in sync.	
What are you planning to do over the next few weeks?	
Continue working on cleaning up and improving the Weather Visualization & start the Quote visualization	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
It's getting real tight, but I have hope.	

Project title:	Music Visualization App
Topic:	Project log number 10 (Week 20) Weather & Quote Visualization
What progress have you made in this topic?	
Finished up the weather visualzation and moved onto getting the quote visualization into the app. It fetches motivational quotes from an external API and displays them dynamically. The background colors and a sound-reactive waveform visualization enhance the experience. Quotes update every 30 seconds with a smooth fade-in effect.	
What problems have you faced and were you able to solve them?	
API response handling: Initially, the quote text wasn't displaying correctly due to incorrect property referencing. I fixed this by ensuring proper data extraction from the response. Smooth transitions: The background and text transitions needed adjustments for a more fluid effect, which I solved by implementing color blending and fading techniques.	
What are you planning to do over the next few weeks?	
Fine-tune background animations to make them more visually appealing. Ensure API error handling is robust to prevent blank quotes & weather data. Test app and refine the user experience for smoother interactions.	
Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?	
I think i am next week will be about making sure what i have is stable and works well.	

Project title:	Music Visualization App
Topic:	Project log number 11 (Week 21) Weather & Quote Visualization

What progress have you made in this topic?

The app is complete and I am now going to test everything. Test it like a user who is going to be using this as a music player.

What problems have you faced and were you able to solve them?

There are a lot of random bugs now that i am trying to use it more robustly. I am trying to fix them all up and we are at the deadline now.

What are you planning to do over the next few weeks?

Well this is the last week. I need to make sure what i have is working well and that my report is all written up.

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?

I am on target.
